JBP launches its new training platform

Last week, JBP Composites are delighted to have successfully completed a three days blended learning course with our colleagues in Malaysia, from Jalur Cahaya Sdn. Bhd., utilizing the benefits of our new online platform.

Our trenchless training portfolio includes courses in a wide range of aspects of trenchless technologies and applications for sewer assets management, including CCTV, robotics, pipe rehabilitation and project management. These cover the complete process from cleaning, inspection, reporting and assessment, through to choosing and applying the most appropriate and effective technology.

Our courses are currently available in English and in the near future will also be made available in Spanish and Portuguese, to give it a worldwide access. For more information visit our training web site www.trenchless.training.

The Trenchless Works magazine dedicated its features pages in its latest issue, with a focus on the key objectives and benefits of JBP's Trenchless Training programme and our new on-line platform. You can read the full article through this link: <https://bit.ly/TWJune>. “
