More on-line training successfully delivered!

At the start of this summer, JBP launched its online training platform, offering the possibility globally to access courses included in JBP' Trenchless Training programme, covering a wide range of trenchless technologies, methods and applications for effective sewer assets management.

Within the last few weeks, our Training Coordinator - Frank Reilly, and two of our leading trainers Dr. Dec Downey and Borje Persson, have worked with more than 50 engineers and technicians from Malaysia's largest utility company in the sector - Indah Water Konsortium (IWK), and contracting companies, to deliver a series of three-day courses in Sewer Pipeline Condition Assessment and coding. Successful candidates are now certified by JBP for competency in applying assessment codes based on CEN standard: EN13508-2:2003+A, and in accordance the coding and classification system contained in the WRc Manual of Sewer Condition Classification (5th Edition).

JBP has over 35 years of experience in the Trenchless Sector, working with technologies and methods to provide successful management and maintenance of sewer pipelines and assets. We are proud to share our experience and knowledge with companies and engineers from all around the world, through our in-situ and online courses and our expert training partners.

✓ Key Benefits for Course Participants

This 3 day course follows EN standard 13508-2:2003+A1 on inspection of sewer pipelines, and leads to certification in classification and coding of sewer pipe conditions in accordance with the WRc MSCC (5th ed.) manual.
